

IN THE CLAIMS:

Please amend the claims as follows:

1-11 (Canceled).

12. (Currently Amended) A Receiver~~receiver~~ comprising a pre-calibrated tuner~~comprising~~arranged therein, said tuner being pre-calibrated prior to arrangement in said receiver and having at least one electronically tuned filter, wherein said ~~tuner~~~~receiver~~ ~~comprises~~includes means for calibrating said electronically tuned filter by retrieving a calibration signal generated by the pre-calibration of said tuner and identified by at least one identifier for identifying~~associated with~~ at least one database field in a database outside said receiver ~~for~~storing at least one said calibration signal for calibrating said electronically tuned filter within said receiver.

13. (Currently Amended) The Receiver~~receiver~~ according to claim 12, wherein ~~said receiver comprises~~ further comprising a receiver memory located outside said tuner for storing said at least one database field having said calibration signal, with said tuner comprising a tuner bus coupled to said receiver memory for receiving said calibration signal.

14. (Currently Amended) The Receiver~~receiver~~ according to claim 13, wherein said database is coupled to a network, with said receiver being coupled to said network.

15. (Currently Amended) The Receiver~~receiver~~ according to claim 13, wherein said calibration signal stored in said database and/or in said receiver memory ~~is~~comprises

a digital calibration signal, with said receiver comprising a digital-to-analog converter for converting the digital calibration signal into an analog calibration signal.

16. (Currently Amended) ~~The Receiver~~ receiver according to claim 15, wherein said tuner comprises said digital-to-analog converter located between said tuner bus and said electronically tuned filter.

17. (Currently Amended) ~~A Tuner~~ tuner comprising at least one pre-calibrated electronically tuned filter for use in a receiver comprising said tuner, wherein said tuner comprises calibration means for retrieving a calibration signal generated during the pre-calibration of said electronically tuned filter by at least one identifier for identifying at least one database field in a database situated outside said receiver for storing at least one calibration signal for calibrating said electronically tuned filter upon arrangement in said receiver.

18. (Currently Amended) ~~The Tuner~~ tuner according to claim 17, wherein said ~~tuner comprises~~ further comprising a tuner bus ~~to be coupled~~ for coupling to a receiver memory for receiving said calibration signal stored in said receiver memory.

19. (Currently Amended) ~~The Tuner~~ tuner according to claim 18, wherein said calibration signal stored in said database and/or in said receiver memory ~~is~~ comprises a digital calibration signal, ~~withand wherein~~ said receiver comprising further comprises a

digital-to-analog converter for converting the digital calibration signal into an analog calibration signal.

20. (Currently Amended) ~~The Tuner~~tuner according to claim 19, wherein said tuner comprises said digital-to-analog converter located between said tuner bus and said electronically tuned filter.

21. (Currently Amended) ~~A Method~~method for electronically tuning at least one pre-calibrated electronically tuned filter in a tuner in a receiver, wherein said method comprises the steps of generating a calibration signal by pre-calibrating said electronically tuned filter prior to arrangement in said receiver, and associating said calibration signal with identifying an identifier of at least one database field in a database situated outside said receiver, and of downloading at least one the calibration signal from said database for calibrating said electronically tuned filter within said receiver.

22. (Currently Amended) A method of selling tuners, the method comprising: providing tuners that comprise at least one pre-calibrated electronically tunable filter and at least one identifier ~~for identifying for retrieving a calibration signal generated during the pre calibration of said electronically tunable filter from~~ at least one database field in a database situated outside said tuner; and operating the database that comprises the database fields for storing calibration signals for calibrating the electronically tunable ~~filters~~filter upon arranging the electronically tunable filter within a receiver.
